Measures in cm

SHAFTS

PTT Python Twist Tech: the bottom part is reinforced with additional carbon bands that increase shaft stiffness and provide shock resistance to the pole.

Super Light Best carbon compound to give maximum lightness and stiffness.

UNPAINTED: The lower part of the stick is not painted, which makes the stick more solid and greener (reduced use of paint).

STIFFNESS: We measure here the stiffness/flexibility of the stick. The 80cm length of the lower part of the tube is stressed until it is bent by 15mm. The resistance is measured in kg and corresponds to the weight of the thrust. The results were divided into 3 categories, namely:

- 1 = superior** (from 17 kg to 21 kg)
- 2 = good** (11 kg to 14 kg)
- 3 = medium** (7 kg to 10 kg)

SWING: A good balance of the pole leads to a better momentum of the movement. The balance of the stick is measured in cm starting from the centre of gravity of the tube and calculating the difference between the lower and upper parts. The results were divided into 3 categories namely:

- 1 = superior** (from 13cm to 16cm)
- 2 = good** (6cm to 10cm)
- 3 = medium** (2cm to 5cm)

PROTECTION
